

Technical Illustration

Miller Consulting Services (MCS) offers technical illustration, image enhancement, and file management services with extensive experience in a variety of industries, including oil and gas. We are dedicated to keeping abreast of leading industry graphics programs and continue to expand our illustration services to streamline your project requirements.

Standardization Services

MCS works with your existing illustrations to standardize file types, tagging, naming, and styles for a consistent, quality-drive result. We tackle fuzzy or unreadable images; images exceeding the margin or page; unalterable raster or scanned images that are misaligned, of poor quality, and excessive file size. MCS fully updates your library or develops anew one from scattered filing structures.

TI Services include:

- ◆ Technical Illustration
- ◆ Marketing/tradeshow materials
- ◆ Booth design/setup
- ◆ Logo/product branding services
- ◆ Company/U.S./worldwide promotional campaigns
- ◆ Presentation package development

Illustration Development

MCS will fulfill your need for technical illustrations on your individual documentation and companywide. We will utilize the graphics software of your choice to create high quality, detailed illustrations, charts, workflows, etc. Our technical illustrators will pull from sketches, photos, and oral or written explanations to create images to fulfill your visual expectations.

Library Creation

Project illustrations, graphs, etc., are a valuable part of required documentation. To be able to locate needed illustrations in a timely manner is essential for keeping projects on schedule. MCS reviews client documentation to develop a master directory of original files to access and edit expeditiously.
